API Key đã cấu hình

Premium Lean Pipeline

Tính năng:

- Domain Detection (6 ngành)
- ISO 8000 Data Cleaning
- Smart Blueprint (8-9 charts)
- Expert Insights (CMO/CFO/COO)

Performance:

- 13-23 giây (target: 55s)
- Quality: 100/100
- 8-9 biểu đồ chuyên nghiệp

Pricing:

- FREE: 60 AI messages/tháng
- PRO: 199k VND/tháng

The First Pass Yield is above benchmark, however, the Defect Rate is also above the world-class target, indicating a need for quality control improvements. While Machine Utilization is excellent, the Average Production Output is slightly below benchmark, and Cycle Time is marginally higher, suggesting opportunities for process optimization.

Top Recommendations:

Implement root cause analysis on defects. Reduce Defect Rate to ≤2%, resulting in a 21% reduction in defective units and associated cost savings.

Optimize production line to improve throughput. Increase Average Production Output to 950 units/shift, improving overall production efficiency by 0.6%.

Conduct time and motion studies to reduce Cycle Time. Reduce Cycle Time to 0.5 minutes/unit, leading to increased production capacity and reduced labor costs.
