🚀 Premium Lean Pipeline

Tính năng:

- ✅ Domain Detection (6 ngành)
- ✅ ISO 8000 Data Cleaning
- ✅ Smart Blueprint (8-9 charts)
- ✅ Expert Insights (CMO/CFO/COO)

Performance:

- ⚡ 13-23 giây (target: 55s)
- 🎯 Quality: 100/100
- 📊 8-9 biểu đồ chuyên nghiệp

Pricing:

- 💻 FREE: 60 AI messages/tháng
- 💎 PRO: 199k VND/tháng

Chuyên gia: Operations Manager (20+ years manufacturing experience, Six Sigma Black Belt)...

> 📋 **Tóm tắt điều hành:**
>
> The First Pass Yield is above benchmark, however, the Defect Rate is also above the world-class target, indicating a need for quality control improvements. While Machine Utilization is excellent, the Average Production Output is slightly below benchmark, and Cycle Time is marginally higher, suggesting opportunities for process optimization.

🔍 Insights chính

🔴 Elevated Defect Rate

The Defect Rate is 2.55%, exceeding the world-class benchmark of 2.0%. This indicates potential issues in the production process leading to increased scrap and rework.

Impact: high

🟡 Suboptimal Production Output

The Average Production Output is 944.37 units/shift, falling slightly short of the benchmark of 950 units/shift. This suggests potential bottlenecks or inefficiencies in the production line.

Impact: medium

🟢 Cycle Time Exceedance

The Cycle Time is 0.508 minutes/unit, exceeding the benchmark of 0.5 minutes/unit. This marginal increase can accumulate and impact overall production efficiency.

Impact: low

🚀 Khuyến nghị hành động

> ❭ 🔴 Implement root cause analysis on defects.

> ❭ 🟡 Optimize production line to improve throughput.

> ❭ 🟢 Conduct time and motion studies to reduce Cycle Time.

⚠️ Cảnh báo rủi ro

> 🔴 Failure to address the high Defect Rate could lead to increased customer dissatisfaction and potential loss of business.
